Notes:

1. If other types of pick & place machines are used, please use the appropriate tool similar to the suggested dimensions and structures for the production process.
2. For components with unique properties such as dome lenses, silicone lenses, and heavier parts, reduced picking speed may help prevent pickup issues and insure production stability.
3. To insure smooth pickup and prevent fling-out of small components such as 1005 series, please insure nozzle and feeder are well maintained to reduce vibrations and maintain picking accuracy.
4. The distance between the nozzle and the component may be set closer to improve pickup in older SMT machines.
5. For LEDs with silicone encapsulation such as the KA and KT series, the outer diameter of the pick-up nozzle must be longer than that of the LED's light emitting area. i. e. $A > C$, and B shall be shorter than the width of the LED.

A is the outer diameter pick-up nozzle, B is the inner diameter of pick-up nozzle, and C is the light emitting area of LED
